SPOCK Bootcamp - Onboarding Storyline

Goal of the onboarding

By the end of the onboarding session on the 1st day of the bootcamp, every product trio should understand:

- Why SPOCK is being tested
- How SPOCK connects to the bank's product discovery methodology
- How the GitHub Copilot environment supports the workflow
- How to work with SPOCK during the bootcamp
- What outputs are expected by the end of Day 2
- What happens with SPOCK after the bootcamp

Bootcamp goal

Over the two days, each product trio will apply SPOCK to a real discovery topic and work toward:

A reviewed PRD and an initiative ready to be transferred to Jira that then will be presented by the teams together with evaluation of their experience of working with SPOCK.

---

1. Why SPOCK, why now

Owner: Center of Excellence Lead — Bambura-Alibaši Ines

Purpose

Set the context for the pilot and explain the problem SPOCK is intended to address.

Prepare

A short opening covering:

- Current discovery pain points
- Why the SPOCK pilot is happening now
- What the pilot is trying to improve
- What success would look like

Suggested content

Product teams spend significant time creating, aligning and reformatting discovery outputs. Practices vary between teams, evidence and decisions are not always connected, and missing context can result in clarification and rework later.

SPOCK is being tested to make discovery:

- Faster
- More consistent
- More evidence-based
- More traceable

SPOCK supports the work, but does not replace product accountability.

Participant outcome

Participants can explain:

- Why SPOCK is being piloted
- What problem it is intended to solve
- What SPOCK is expected to improve

Key message

> ***SPOCK prepares and structures work. Product teams still validate evidence, challenge assumptions, make trade-offs and approve decisions.***

---

2. How SPOCK fits the methodology

Owner: Guild Master Product Management — Havlíek Tomáš

Purpose

Connect SPOCK to the bank's existing product discovery methodology.

Prepare

A concise overview of the relevant parts of:

- Product Development Lifecycle
- Product Compass
- Opportunity Solution Tree methodology

Only cover what participants need to understand the SPOCK workflow. Avoid a full methodology overview.

Suggested content

Explain where discovery sits within the Product Development Lifecycle and Product Compass.

Then connect the methodology to the SPOCK workflow:

Initiative Brief Opportunity Framing Hypothesis Design / Competitive Analysis Solution Ideation MVP Definition PRD Initiative Design

Participants should understand:

- The difference between evidence, assumptions, opportunities and solutions
- Why teams should not jump directly to a solution
- Why SPOCK separates these steps
- Where human judgment and decisions are required

Methodology Coach

The Methodology Coach can be called at any point to explain the discovery methodology.

It does **not**:

- Create or modify artifacts
- Approve outputs
- Make product decisions
- Advance the workflow

Participant outcome

Participants understand how the SPOCK workflow maps to the bank's discovery methodology and why the individual workflow steps exist.

Key message

> ***SPOCK supports the methodology; it does not replace product thinking or product judgment.***

---

3. The working environment

Owners: Technical Facilitators — Shramov Ilya + Bedáová Veronika

Purpose

Make sure participants understand the environment in which SPOCK operates and can use it confidently.

Technical setup should already be completed before the bootcamp.

Prepare and verify before the session

Confirm that:

- Repository access works
- Branches are prepared, or the branching process is confirmed
- GitHub Copilot is available
- The SPOCK workflow can be executed
- Fallback steps are documented if an automated handoff does not work

Cover

Explain only the technical concepts participants need for the bootcamp:

- **VS Code** — the workspace
- **GitHub Copilot** — the interaction environment
- **Repository** — the shared source of inputs, outputs and decisions
- **Cloning and branching** — only to the level required during the bootcamp

Avoid generic Git, GitHub or developer training.

Explain why the repository matters: it preserves inputs, outputs, corrections, approvals and decisions across the workflow.

Participant outcome

Participants know:

- Where they will work
- Where SPOCK outputs are stored
- How workflow artifacts are passed between stages
- Why the repository is important for traceability

Key message

> ***The repository is the shared memory of the discovery process.***

---

4. How to work with SPOCK

Owner: SPOCK Facilitator — Bedáová Veronika

Purpose

Show participants the actual working pattern they will use throughout the bootcamp.

Prepare

A working demonstration of at least one SPOCK stage from start to finish.

Use the same operating pattern participants will follow during the bootcamp:

Input SPOCK action Review Correction Human approval Saved output Next step

Demonstrate

Show:

- Where the participant starts
- What input SPOCK requires
- How to trigger the relevant workflow step
- Where the output appears
- How to review and challenge the output
- How to correct or refine the output
- How human approval is captured
- How the next workflow step uses that artifact

Participants should understand that reviewing SPOCK is part of the workflow, not an exception.

Make accountability clear

- SPOCK can structure opportunities **the trio decides what matters**
- SPOCK can generate solution options **the trio decides what to pursue**
- SPOCK can prepare an MVP or PRD **the trio approves the scope and content**

Also explain current pilot limitations, particularly:

- Where handoffs may still be manual
- Where workflow functionality is still partial
- That direct Jira creation is not yet confirmed

Participant outcome

Participants understand how to:

- Run a SPOCK workflow step
- Review the output
- Correct or refine it
- Approve it
- Continue to the next stage

Key message

> ***Do not use SPOCK as an answer engine. Use it as the workflow through which the trio performs discovery.***

---

5. Bootcamp outputs and evaluation

Owner: Bootcamp Lead - Bedáová Veronika

Purpose

Make the expected outcome of the two-day bootcamp completely clear.

Prepare

Define and communicate:

- Required final outputs
- End-of-bootcamp presentation format
- SPOCK evaluation questions
- Expected level of completeness

Required outputs by the end of Day 2

Each trio should produce:

1. **Reviewed PRD**
2. **Initiative ready for Jira transfer**

Final presentation

Each trio should present:

- Its discovery outcome
- The PRD and initiative output
- Its experience using SPOCK

SPOCK evaluation

Each team should reflect on the same questions:

- Where did SPOCK save time?
- Where did SPOCK slow the team down?
- Which outputs required significant correction?

- Where was methodology guidance useful or unclear?
- Did the workflow preserve context and reasoning between stages?
- What blocked or confused the team?

What the pilot is testing

The pilot should help assess whether SPOCK improves:

- Speed
- Output consistency
- Quality and usability of AI-supported outputs
- Methodology application
- Traceability between discovery stages
- Downstream readiness

Participant outcome

Every trio understands exactly what it needs to produce, evaluate and present by the end of Day 2.

Key message

> ***The goal is not to complete as many SPOCK steps as possible. The goal is to produce a coherent, reviewed and traceable discovery outcome.***

---

6. What happens after the bootcamp

Owner: SPOCK Team / Bootcamp Lead - Bambura-Alibaši Ines Bedáová Veronika

Purpose

Set clear expectations about continued access, pilot status and next steps.

SPOCK after the testing will no be accessible until further announcement with the goal to make it accessible ASAP.

Key message

> ***The bootcamp is the start of the pilot learning cycle, not the end of SPOCK development.***

Overall onboarding principle

One person should own the coherence of the full onboarding morning and ensure that the individual sections do not overlap, contradict each other or repeat the same information.

Each section should answer one clear question:

Section	Question
1. Why SPOCK, why now	Why are we doing this?
2. Methodology	What methodology are we following?
3. Working environment	Where do we work?
4. Working with SPOCK	How do we use SPOCK?
5. Outputs and evaluation	What do we need to deliver?
6. After the bootcamp	What happens afterwards?

Four principles participants should remember

Use SPOCK to structure the work.

Use evidence to challenge the output.

Use the trio to make the decisions.

Use the repository to preserve the reasoning.
