SPOCK Testing Bootcamp Guideline

Overview

Welcome to the first testing bootcamp for **SPOCK, our AI-native Product Discovery workflow**.

Over two days, participating product duos/trios will work through a real discovery topic using SPOCK.

The goal is not only to learn how the workflow works, but to **apply SPOCK to your own product challenge and leave the bootcamp with tangible discovery outputs**:

- a reviewed and signed-off **Product Requirements Document (PRD)**;
- an **Initiative ready to be transferred to Jira**;
- practical experience with the SPOCK workflow;
- structured feedback to help the SPOCK team improve the product before the next testing phase.

This is a **working bootcamp rather than a training-only session**. Most of the two days will be spent working in your own teams on your selected discovery topic.

Who should attend

Each participating team should ideally attend as a **product duo or trio**:

- **Product Manager - mandatory**
- **Product Designer with a research focus - mandatory**
- **Engineer / Tech Lead - optional**, particularly if interested in AI and the product discovery phase

Please plan to participate throughout both days wherever possible.

Date & location

Wednesday, 23 September 2026

Thursday, 24 September 2026

Location: PDE Maxi & PDE Mini
Polákova, 1st floor — door on the left at the end of the hallway

Small catering and good coffee will be provided on both days.

Please bring your **laptop and charger (each team member)**.

Agenda

Wednesday - 23 September

08:30–09:00
Arrival & coffee

09:00–9:15

Introduction *Led by Ines and/or Monika*

9:15-12:00

SPOCK onboarding and guided first discovery steps:

1. **9:15-9:45** Methodology insight led in Czech by Havlíek Tomáš
2. **9:45-10:00** Coffee break
3. **10:00-10:50** VS code setup and working with Github Copilot led in Czech by Bedáová Veronika and Shramov Ilya
4. **10:50-11:00** Coffee break
5. **11:00- 11:30** Intro into SPOCK led in Czech by Bedáová Veronika
6. **11:30- 12:00** Data sanitisation time

12:00–13:00
Lunch

13:00–16:30
Team discovery work with SPOCK
Teams work individually, with support from the SPOCK core team

16:30–17:00
End-of-day sharing: progress, learnings and blockers

Thursday - 24 September

08:30–09:00
Arrival & coffee

09:00–12:00
Team discovery work
Teams work individually, with support from the SPOCK core team

12:00–13:00
Lunch

13:00–15:00
Final discovery work and preparation of outputs

15:00–17:00
Results presentations, feedback and wrap-up

You can use this Jira to report time spend on the preparation of the bootcamp: **PDM-1007** - Píprava podklad a technických prerekvizit DONE

For the time spent on the boocamp, use this task: **PDM-1015** - Bootcamp participation (23-24.9.2026) DONE

Expected outcomes

By the end of the bootcamp, each team should have:

- experienced the SPOCK product discovery workflow end-to-end;
- applied SPOCK to a real product discovery topic;
- worked with its own product context, research and source materials;
- generated, reviewed and signed off the resulting discovery outputs; (**Product Requirements Document (PRD)**; an **Initiative that can subsequently be transferred to Jira)**
- presented the results of the discovery work;
- reflected on the experience of working with SPOCK;
- provided structured feedback to help improve SPOCK before the next testing phase.

Preparation required

For the bootcamp to be productive from the start, each participating team needs to complete two areas of preparation:

1. **Technical setup**
2. **Product discovery materials**

Please do not leave either preparation stream until the morning of the bootcamp.

---

1. Technical setup

SPOCK will initially be used through **GitHub Copilot in VS Code**.

Before the bootcamp, all team members should have completed the setup described in the technical setup guide: **[Technical Setup Instructions]**:

- VS Code installed;
- GitHub Copilot installed and activated;
- access to the required GitHub environment/repository (repository still work in progress);
- confirmed that the environment is working.

Technical readiness deadline

Please have the complete technical setup **installed, tested and working by Monday, 21 September**.

This gives us time to resolve any remaining access or technical issues before the bootcamp.

Because the participant group is relatively large, please first involve **support engineers within your own team for standard installation/setup issues**.

For questions related specifically to the SPOCK repository or environment, please contact:

Shramov Ilya

For other technical issues, contact IT support.

---

2. Product discovery materials

Each team should select **one real discovery topic, product problem or idea space** to work on during the two-day bootcamp.

Please select a topic that is relevant to your team and where you have enough existing context or research material to meaningfully run a discovery process.

For the selected topic, prepare the following.

A. Initial brief

Complete the initial brief using:

[Initial Brief Structure]

The brief should provide enough context for someone outside your team to understand:

- the **problem or idea space**;
- the **expected outcome**;
- the **target users/customers**;
- relevant **product goals**;
- the relevant **North Star**;
- the connection to **bank strategy**;
- the **market scope**.

The purpose of the brief is to give SPOCK sufficient initial context to start the discovery workflow.

B. Raw research / source materials

Please prepare the relevant existing research and evidence your team would normally use during discovery.

This can include, for example:

- interview notes;
- interview transcripts;
- customer feedback;
- survey results;
- product analytics summaries;
- previous research;
- support or customer-service insights;
- other relevant source material.

Please provide **raw or unprocessed source material in .md file** **rather than only pre-synthesised conclusions**.

If you need help with providing the material in .md file, please reach out to the SPOCK team and we will help you manage that. (Bedáová Veronika Bambura-Alibaši Ines)

One purpose of the test is to understand how SPOCK works with underlying discovery evidence and how it supports teams in generating insights and outputs from that evidence.

Data considerations

Please only provide materials that are appropriate for use. Do not include restricted, highly sensitive or otherwise prohibited information, C2 level data.

If you are unsure whether specific material can be used, please check with **Bedáová Veronika** **or** **Bambura-Alibaši Ines** before submitting it.

Do GitHub Copilotu a SPOCK repozitáe vkládejte pouze C1 nebo C2 obsah; nevkládejte C3, C4, produkní klientská data, osobní údaje, bankovní tajemství, hesla, tokeny ani API klíe. Používejte anonymizované nebo syntetické vstupy.

Product materials deadline

Please submit your:

- completed initial brief; and
- research/source materials

by Tuesday, 16 September, EOD.

Submit everything here:

[Bootcamp use cases]

The SPOCK core team will review the materials before the bootcamp.

The purpose of this review is to:

- confirm that the selected topic is suitable for the bootcamp;
- make sure there is sufficient context and source material;
- identify missing inputs;
- resolve potential blockers while there is still time to make adjustments.

If we identify any gaps, the SPOCK team will reach out to you before the bootcamp.

Readiness checklist

Before arriving on Wednesday, please confirm that:

- Your product duo/trio knows which discovery topic you will work on.
- Your Product Manager and Product Designer are available for both days.
- Your initial brief was submitted by 16 September.
- Your research/source materials were submitted by 16 September.
- VS Code is installed and up to date.
- GitHub Copilot is installed, activated and working.
- You can access the required GitHub/SPOCK environment.
- Any technical issues have been resolved before 21 September.
- Both bootcamp days are blocked in your calendar.
- You are bringing your laptop and charger (each participant).

How we will work during the bootcamp

This is a hands-on working session.

After the initial onboarding on Wednesday morning, teams will primarily work **individually on their own discovery topics using SPOCK**.

The SPOCK core team will be available throughout both days to:

- facilitate the workflow;
- answer questions;
- help unblock teams;
- troubleshoot SPOCK-related issues;
- observe how teams use the workflow;
- collect feedback.

We encourage teams to work as they would during a real discovery process rather than trying to produce a “perfect” test result.

Your feedback, questions, confusion and friction are all important inputs for improving SPOCK.

Thursday results presentation

On Thursday afternoon, each team will briefly present the outcome of its discovery.

Please be ready to cover:

1. **The discovery topic** you started with.
2. **The main inputs/evidence** you worked with.
3. **What SPOCK helped you discover or clarify.**
4. **The resulting PRD / proposed initiative.**
5. **What sign off you made regarding SPOCK's outputs.**
6. **What worked or did not work well in the workflow.**
7. **Your key recommendation for improving SPOCK.**

The goal is not to evaluate the teams. The presentation is primarily intended to share discovery outcomes and capture learning from the SPOCK testing experience.

Key dates

16 September, EOD
Initial brief + research/source materials submitted

21 September
Technical setup installed, tested and working

23 September
Bootcamp Day 1

24 September
Bootcamp Day 2 + final presentations
